

## YAMATO OFFERS IMPROVED WEIGHING SOLUTION FOR RIGID AND SEMI-RIGID CONTAINERS

*Yamato's Multi-Point Depositor fills rigid or semi-rigid containers quickly and accurately*

**MEQUON, WI** (July 16, 2019) Yamato, a leading provider of automatic, commercial, and industrial weighing solutions is improving the way companies fill rigid and semi-rigid containers. Yamato will be highlighting the Multi-Point Depositor at PACK EXPO 2019 in booth LS-5950.

Yamato's Multi-Point Depositor, ideal for snacks, fruits, vegetables, and fresh or frozen meals, offers cost savings and improves efficiency when filling rigid or semi-rigid containers. It works in tandem with a Yamato combination scale and easily integrates into a packaging line.

With the Yamato Multi-Point Depositor, product is automatically weighed and deposited into trays. This eliminates effort typically used to portion and fill containers by hand, allowing companies to reduce labor and risk.

With this automated system, companies also see improved productivity and food safety since product is deposited cleanly, which helps ensure a seal properly adheres to the package.

"Given the food safety benefits, portion accuracy and through-put, ROI can usually be achieved in 12 to 18 months," according to Larry Chmielewski, general manager of tray lines at Yamato. "One customer that installed the system was able to complete all of the production they had scheduled for the year in six months."

This customizable weighing and packaging solution offers:

- A high-sanitary design
- Tool-free assembly and teardown for easy changeover and cleaning
- Compatibility with various packaging formats including cups, preform trays, thermoform trays, and more
- Configurable tray patterns
- Single-source integration with Yamato scales

Yamato also offers an optional accessory parts cart for the Multi-Point Depositor. Featuring heavy-duty construction of stainless steel and an ergonomic design with locking casters, this solution provides ease of use, creating a central yet portable location for parts to be placed for proper cleaning.

## **About Yamato Corporation**

Yamato Corporation is the leading provider of automatic, commercial, and industrial weighing solutions in North, Central, and South America. Yamato offers scales that support a wide variety of markets. Yamato combination weighers, checkweighers, and depositors can address virtually any packaging application. Yamato commercial scales offer convenient weighing for a variety of retail markets, and Yamato industrial scales are ideal for very high target weight applications.

Located in Mequon, Wisconsin, Yamato Corporation is fully committed to its machines, and to its customers. With an extensive inventory of genuine Yamato parts on hand, Yamato can deliver what customers need, when they need it. Yamato also provides training, emergency response service, and preventative maintenance plans for all generations of scales through the Yamato Genuine Service Program. Additional offices are in Lake Forest, California, and Mexico City, Mexico, to provide customers with superior service.

Yamato Corporation is a subsidiary of Yamato Scale Company, Ltd., headquartered in Akashi, Japan. Worldwide, Yamato Scale has subsidiaries and business partners in over 80 countries. Founded in 1920, Yamato Scale is celebrating 100 years of providing innovative, high-quality weighing equipment and systems to food processing, commercial, and industrial markets.
